VORTEX POC

Signal-Led GTM Engine

A contained 4-month proof-of-concept for Axis Group and Vortex

THREE PLANS · STARTER · GROWTH · FULL ENGINE

Prepared for **Ravi Rao** · Chief Revenue Officer, DigitalNet.ai

Prepared by Parth Nagda · Valcat · 2026-06-26

TL;DR

If you only read one page, read this one.

⚡ THE OPPORTUNITY

A company happy on Tableau will not move. A company that just got forced off Qlik or Tableau is ready to act today, and that is exactly when Vortex matters most. The entire motion is about reaching **those accounts at the exact moment a migration becomes urgent**, before Microsoft's field team or a big SI gets there first. This POC builds that engine for **one** business, Axis Group and Vortex, so you can see whether it works before expanding to the rest of the portfolio.

This is a contained, four-month proof of concept. We find the accounts that are migrating right now, reach the decision-maker with a personalized message, hand your reps warm accounts, and keep the CRM alive. There are three plans, from a simple email channel test up to the full white-glove system. Pricing and exactly what is included at each tier are on the [Pricing page \(section 05\)](#).

⚡ THE TIMELINE

Month 1: data foundation built, signal engine live, copy written, infrastructure warmed.

Months 2 to 4: signal-led outreach runs, angle iterated weekly.

Week 16: review, then expand, iterate, or stop.

◆ WHICH PLAN FITS

Starter tests the email channel. A toe in the water, not a full POC.

Growth is the full email motion plus light LinkedIn and live signal timing.

Full Engine is the complete white-glove system, with signals fed into your CRM.

NEXT

Confirm the plan and the Axis Group CRM dump, and we start. Full step-by-step on the last page.

The Opportunity and Buyer Thesis

Axis Group's Vortex automates migration from **Qlik and Tableau to Power BI and Microsoft Fabric**, cutting migration effort up to 70% via the metadata Harvester. Microsoft Fabric adoption is accelerating, and Vortex wins Microsoft pursuits off the back of it. The product is excellent. The question is purely **reaching the right account at the right moment**.

THE THESIS

A team happy on Tableau will not move. A team that just got forced off Qlik or Tableau is ready to act today, and that is when Vortex is most valuable. So the entire motion is about reaching accounts **at the moment a migration becomes urgent**, before Microsoft's field team or a big SI gets there first. We do not blast everyone. We reach out only when a live trigger fires.

Who we target

DIMENSION	DEFINITION
ICP	Mid-market to enterprise, current Qlik or Tableau users, Microsoft-leaning data estate, US (matches Axis's delivery footprint).
Personas	Head, VP, or Director of Data and Analytics, BI or Analytics lead, Data Platform owner, CDO or CDAO, plus Microsoft alliance and partner contacts.
Disqualify	Already fully on Power BI, committed to a non-Microsoft cloud (for example AWS only), or no Qlik or Tableau estate to migrate.

THE SAMPLE ANGLE A PROSPECT ACTUALLY HEARS

"Saw you are hiring two Power BI developers while still running Tableau. That dual-stack window is exactly where teams overspend. Axis Group's Vortex automates the Qlik and Tableau to Fabric migration and cuts the effort around 70%. Worth a 20-minute look before you staff up further?"

Every line either shows we know something about them or tells them what Vortex does. No filler.

The Signals We Track

A signal is an event with a clock on it. The examples below are a **starting set**, illustrative of the kinds of triggers that say a Vortex migration is becoming urgent. They are not the whole list. A core part of the POC is discovering which signals actually predict a purchase in your market, proving each one on live data, keeping what works, and layering in new ones over time.

EXAMPLE SIGNALS · A STARTING SET

#	SIGNAL (EVENT)	WHY IT MEANS "BUY VORTEX NOW"	PRECISION
1	Hiring Power BI, Fabric, or Azure data engineers while a Tableau or Qlik estate still exists	Migration is funded and in motion this quarter. Highest-intent moment for Vortex.	High
2	New Head of Data, CDO, or VP Analytics, under 12 months in seat	New data leaders re-evaluate the BI stack in their first 90 days. Ripping out Tableau is a classic first-100-day move.	High
3	Tableau or Qlik renewal or license-cost pain (public)	Posts, threads, or job reqs about Tableau cost or consolidating BI tools signal active dissatisfaction.	Medium
4	Microsoft Fabric adoption intent	FabCon attendance, Power BI Premium or Fabric capacity expansion. They have committed to the Microsoft platform. Vortex is the <i>how</i> .	High
5	Qlik or Tableau EOL, pricing, or ownership-change pressure	An external shove off the legacy tool pushes whole segments to migrate at once.	Medium
6	Recent funding or digital-transformation budget	Money to modernize. A booster only, never fired alone, stacked on signals 1 to 4.	Low alone, high stacked

The Signals We Track · cont.

A SIGNAL-DISCOVERY ENGINE, NOT A FIXED LIST

The six above are where we start, not where we stop. We run a continuous loop: hypothesize a trigger, validate it on live accounts, keep the ones that hit, drop the ones that do not, and add new sources as we find them (job posts, leadership moves, license and renewal chatter, Fabric and FabCon activity, funding, M&A, tech-stack shifts, and more). The set only grows over the engagement, and we report which signals are actually driving replies.

HOW SIGNALS MAP TO PLANS

- **Starter:** no signal tracking. Static campaigns only.
- **Growth:** track up to **3 signals** at a time across your campaigns.
- **Full Engine:** the **full, continuously expanding set** of validated signals, scored and fed live into your CRM.

What We Build

Four workstreams, the same flow you walked through in the interactive demo. TAM mapping, signal scoring, rep enablement, and a CRM that stays alive. Together they form a GTM Engineering function, the operating model the best go-to-market teams now run on. Which workstreams switch on depends on the plan.

1 · Data Foundation and TAM Mapping

Growth and Full. Take a messy CRM to a clean, qualified, scored universe.

- Ingest the Axis Group CRM dump (accounts and contacts, however messy) and enrich it to around 95% coverage via an enrichment waterfall, for maximum coverage rather than one vendor.
- Qualify every company against the ICP: current Qlik or Tableau estate, Microsoft footprint, vertical fit. Disqualify and suppress the dead ends with a logged reason.
- Discover the decision-makers per account (CDO, VP Analytics, BI lead, Data Platform owner) and find verified business emails and direct dials.
- **Starter** runs on a basic targeted list instead of the full foundation, which is why it carries no setup fee.

2 · Signal Intelligence

Growth tracks up to 3 signals. Full runs the full, growing suite.

- Run the discovery loop against every qualified account: hypothesize triggers, validate on live data, keep what predicts a purchase, and add new sources continuously.
- **Growth** tracks up to 3 signals at a time. **Full Engine** runs the full, continuously expanding suite and feeds it live into your CRM.
- Compute a readiness score (fit times timing) and tier accounts Hot, Warm, or Nurture. Every account carries a *dated reason to act now*.

What We Build · cont.

3 · Outreach and Rep Enablement

Email on every plan. LinkedIn on Growth and Full. Rep enablement on Full.

- **Email, Starter:** up to 3 static campaigns per month. **Growth and Full:** unlimited, per-person personalized email, one AI agent researching each person.
- **LinkedIn, Growth:** automation on 2 reps' profiles. **Full:** unlimited reps, fully personalized.
- **Rep enablement, Full only:** signal and research data piped to your reps so cold calls land warm. We do not do voice, your reps do. We make their calls smart.

4 · CRM, Enrichment, and Enablement

Full Engine only. Research and act. The piece that makes it an engine you own.

- Every record enriched (BI stack, cloud, revenue, headcount) and kept current. CRM hygiene: dedupe and fill the gaps automatically.
- **Deep research dossier** per priority account: who owns BI, what they run, and where the migration pressure is.
- **Buying-committee mapping:** the data leader, the platform owner, and the Microsoft alliance contact, not just one name.
- The full signal suite refreshed continuously, so nothing goes stale. Score and tier update on their own.
- **Champion and job-change tracking:** when a data leader moves, the account re-enters the hot list automatically.
- **Research and act:** a clear next-best-action written to every account, with a drafted opener ready for one-click send, plus heat alerts to your reps the moment an account lights up.

The 4-Month Roadmap

Day 0 is the day we receive the signed engagement and the Axis CRM dump. Month 1 builds the machine. Months 2 to 4 run it and tune it.

WEEK 1

Data foundation

CRM ingested, the enrichment waterfall starts, ICP modeled from your best customers.

WEEK 2

Qualify and discover

Accounts qualified and scored, decision-makers found, signal-discovery loop begins.

WEEK 3

Build the outreach

Per-prospect copy written, sequences assembled, sending infrastructure warming.

WEEK 4

Go-live

Signal-led email and LinkedIn start. Reps begin receiving warm, signal-backed accounts.

WEEKS 5 TO 8

Run and learn

Weekly reporting, angle and signal testing, and the CRM kept live on Full Engine.

WEEKS 9 TO 12

Double down

Scale the signals and angles that are working, prune the ones that are not.

WEEKS 13 TO 15

Compound

Pipeline matures, rep enablement is humming, and the data asset is fully current.

WEEK 16

Review and decide

What worked, what to tune, then expand, iterate, or stop. You keep the asset either way.

Pricing

One contained 4-month POC on Axis Group and Vortex. Three plans, by how much of the machine you switch on. Every number lives on this page.

PLAN A	PLAN B	PLAN C
Starter	Growth	Full Engine
Email channel test. Static campaigns only.	Full email, light LinkedIn, live signals.	Everything, plus CRM and rep enablement.
\$1,500 / mo	\$2,500 / mo	\$3,300 / mo
4-month all-in: \$6,000	4-month all-in: \$12,000	4-month all-in: \$15,200
SETUP (ONE-TIME)	SETUP (ONE-TIME)	SETUP (ONE-TIME)
None	\$2,000	\$2,000

💡 WHAT THE NUMBERS COVER

- **Monthly:** billed at the start of each month across the 4-month POC. **Setup** (Growth and Full) is a one-time data-foundation fee billed with the first invoice; **Starter has no setup fee.**
- **Tools and infrastructure:** sending domains, mailboxes, LinkedIn seats, and enrichment credits are billed on top, at cost with no markup, sized to the volume we run. We provision and run all of it, so your team never manages a tool. We share the exact number in kickoff before anything is bought.
- **Per business:** covers Axis Group and Vortex only. Expanding to other portfolio companies is far cheaper than starting over (see section 10).

Comparison Matrix

What is included in each plan, side by side. Numbers are on the Pricing page.

CAPABILITY	STARTER	GROWTH	FULL ENGINE
EMAIL OUTREACH			
Email campaigns per month	3 max	Unlimited	Unlimited
Static campaigns	●	●	●
Per-person personalized email	○	●	●
Multi-step sequences and reply handling	○	●	●
LINKEDIN OUTREACH			
LinkedIn automation	○	2 reps	Unlimited reps
Fully personalized across all platforms	○	○	●
DATA FOUNDATION AND SIGNALS			
Axis CRM enriched to around 95% coverage	○	●	●
ICP modeling, dedupe, and validation	○	●	●
Decision-maker contact discovery	○	●	●
Signal tracking	○	Up to 3	Full suite
Continuous signal discovery and testing	○	Limited	●
Account readiness scoring (Hot, Warm, Nurture)	○	●	●
CRM, ENRICHMENT, AND ENABLEMENT			
Full signal suite fed live into CRM	○	○	●
Ongoing CRM enrichment and hygiene	○	○	●
Deep account research dossiers	○	○	●
Buying-committee mapping	○	○	●
Champion and job-change tracking	○	○	●
Research and act: drafted next-best-action	○	○	●

What Success Looks Like

This POC is measured on **pipeline and sales-cycle impact**, not a vanity meeting count. The targets below are **directional goals**, what a healthy run looks like, not guarantees. Coverage and signal goals apply to Growth and Full, which include the data foundation.

DIMENSION	DIRECTIONAL GOAL BY WEEK 16
Data coverage	Axis CRM from a typical 10 to 20% complete up to around 95% coverage , fully ICP-qualified and signal-scored.
Qualified pipeline	A standing, refreshed list of signal-scored Hot accounts feeding reps every week. A real, sourced pipeline of migration-ready opportunities, not a one-time list.
Sales-cycle compression	Reps open conversations with a <i>dated reason to act now</i> already in hand. Warmer first calls, shorter time from first touch to qualified conversation.
Rep efficiency	Per-account research time for your reps driven toward zero . The signal, contact, and angle arrive pre-built (Full Engine).
The asset	At Week 16 you own the enriched data, the signal engine, the sequences, and the workflows, whether or not you renew.

HOW WE REPORT IT

Weekly: accounts scored, signals fired, outreach sent, replies, meetings booked, and pipeline influenced, shared against the directional goals above so you always see progress, not a black box. Meetings are a *consequence* of the engine, which is why we score on timing rather than volume.

Why This Beats Pay-Per-Meeting

You raised the ten-meetings-guaranteed agency model. Here is the contrast, and why a GTM engine is the better buy for a product like Vortex.

	PAY-PER-MEETING AGENCY	VALCAT (THIS POC)
What you buy	A number of meetings	A GTM engine that keeps running
After the meeting	Their job is done	Reps get signal and research, so the sales cycle shortens
Personalization	Template blast	Per-prospect AI research
The asset	Rented	Yours. Data, signals, workflows stay
Metric	Meeting count	Meetings plus sales-cycle compression

YOUR OWN INSIGHT

“Not every opportunity is revenue.” Agreed, and that is exactly why we score on **signals (timing)** instead of volume. Meetings are a consequence, not the product.

WHAT YOU ARE REALLY STANDING UP

This POC does more than run campaigns for Vortex. It stands up a **GTM Engineering function** inside DigitalNet: the signal-driven, AI-augmented operating model that the **top 1% of go-to-market teams** now run on, the modern successor to manual RevOps, business development, and sales enablement. From day one you operate at that level, and every company you add inherits the same capability.

What We Need From You

A short list. We supply everything else, including the full stack, the signal engine, copy, deliverability, and the sending infrastructure.

FROM YOU	DETAIL
Axis CRM dump	Accounts and contacts, however messy. We enrich and expand it, so you do not need to clean it.
A few good-customer examples	So we model the ICP accurately.
LinkedIn access (Growth and Full)	Your reps' LinkedIn profiles connected for automated outreach. 2 reps on Growth, all reps on Full.
Tool and enrichment funding	The tools and infrastructure we run on your behalf are billed at cost, no markup, sized to volume (see Pricing).
One point of contact	A single owner on your side for the 4-month loop.

WE HANDLE THE SENDING INFRASTRUCTURE

You do not procure or manage anything on the email side. We provision and run dedicated sending domains and mailboxes (never your primary domain, so **axisgroup.com** reputation stays protected), warm them, and monitor deliverability throughout. It simply shows up on the at-cost tools line.

Beyond the POC

This is deliberately scoped to **one** business, Axis Group and Vortex. That is the right way to prove the motion before committing further. The good news is that the second company, and the third, cost a fraction of the first.

✓ YOU DO NOT PAY 4X FOR 4 COMPANIES

Expanding across the portfolio is easy and far cheaper than the first build. The infrastructure, tooling, signal engine, automations, and playbook are built once and reused. Each new company needs only its own ICP, list, and copy. It rides on the shared foundation. **The more companies you add, the lower the marginal cost per company.** Real economies of scale if you plan to roll this across the portfolio.

What carries over (built once, reused)

- The enrichment and data stack
- The signal-discovery engine
- The CRM automations and reporting
- The sending infrastructure and deliverability setup
- The sequences, templates, and playbook
- The reusable workflows you already own

Why one company first is the smart move

- **De-risked:** you see whether this kind of effort really works on a contained budget before scaling.
- **Faster to value:** one ICP, one offer, one signal set. We get to go-live in weeks, not quarters.
- **A real template:** the Vortex engine becomes the reference build for every subsequent rollout.

✓ WEEK-16 DECISION GATE

At the end of the 4 months you decide: **expand** (other portfolio companies, at the lower marginal cost above), **iterate** (tune angle, offer, or ICP on Vortex), or **stop**. You are in control, and you keep the asset regardless.

Engagement Terms

A concise summary of the commercial terms. A full Service Agreement is issued on plan confirmation, and the terms below mirror Valcat's standard GTM Engineering services contract.

PARTIES

Service Provider

Valcat
parth@valcat.co
www.valcat.co

Client

DigitalNet.ai (for Axis Group and Vortex)
Attn: Ravi Rao, Chief Revenue Officer

1. Scope

1.1 Valcat delivers the services in the Plan selected by Client (Starter, Growth, or Full Engine), as described in section 03 (What We Build) and section 06 (Comparison Matrix), scoped to Axis Group and Vortex only for a four-month proof of concept.

1.2 CRM maintenance and enrichment, signals fed into the CRM, and the rep-enablement motion are included in **Full Engine only**, and are not available as add-ons to Starter or Growth.

1.3 Expansion to additional DigitalNet portfolio companies is out of scope here and contracted separately (section 10).

2. Fees and Payment

2.1 Fees are as set out in the Pricing section (section 05): a fixed monthly fee per the selected Plan across the four-month term, plus a one-time data-foundation setup for Growth and Full Engine. Starter has no setup fee.

2.2 Tools and infrastructure (sending domains, mailboxes, LinkedIn automation seats, enrichment credits) are billed at cost, sized to volume, with no markup. Valcat provisions and runs all of it; Client funds the pass-through.

2.3 Invoices are payable within seven (7) days. Fees are non-refundable for the period in which services are rendered.

3. Term

The engagement runs four (4) months from the Effective Date (signed confirmation and first invoice paid). At Week 16 the parties review and decide to expand, iterate, or conclude.

Engagement Terms · cont.

4. Outcomes and Warranties

Services are performed in a professional, workmanlike manner. The directional goals in section 07 are **targets, not guarantees**. Valcat does not guarantee specific revenue, meeting counts, conversion rates, or pipeline outcomes, as these depend on factors outside Valcat's control, including Client's product, brand pull, market timing, sender-reputation history, and Client team performance.

5. Intellectual Property

On full payment, Client owns all campaign assets, enrichment data, lead lists, automation workflows, copy, and documentation created for Client under this engagement. Valcat retains its pre-existing methodologies, frameworks, and anonymized learnings.

6. Confidentiality

Both parties keep confidential any proprietary information shared (CRM data, ICP, strategies, metrics). The obligation survives termination for two (2) years.

7. Limitation of Liability

Valcat's total liability shall not exceed the fees paid in the three (3) months preceding a claim. Neither party is liable for indirect, incidental, or consequential damages.

Next Steps

From yes to first outbound, here is exactly what happens.

1

Pick your plan

Reply with the plan: Starter, Growth, or Full Engine. One line is enough.

2

We send the agreement and first invoice

Same day. You confirm or e-sign and pay the first invoice (first month, plus setup for Growth or Full).

3

Send the Axis CRM dump

Accounts and contacts, however messy, plus a few good-customer examples so we model the ICP.

4

Kickoff call

A 60-minute call: lock the ICP and offer, confirm the signals to track, and we share the volume-based tools number before anything is bought.

5

Month 1 build

Data foundation up to around 95% coverage, signal engine live, copy and sequences written, infrastructure warming, all in parallel.

6

Go-live (Week 4)

Signal-led email starts, plus LinkedIn on Growth and Full. Reps begin receiving warm, signal-backed accounts. Weekly reporting begins.

Questions or want anything re-scoped? Reply on email or grab time at cal.com/parth5/30min

Follow-up call already on the calendar: **Fri 2026-06-26, 12:00 PM EST.**
